

Hermetic is reliable...

This is not hermetic,
it has no MICROKIT
quality

So are our PLAQUIS®

- ✓ Hermetic
- ✓ Reliable
- ✓ Controlled

Ready-to-use, sealed and sterile
for filtration membrane and other
surface inoculations

1. Long shelf life (6-9 months versus <1-2 months of traditional plates), avoiding having to discard plates that expire before they have been able to use; and eliminating the need to undergo closed schedules.
2. Minimize air spores contamination during transport and storage: higher quality, lower-risk, saving time and trouble, to avoid complaints to suppliers.
3. Save space: no need to be stored in a refrigerator, file cabinets only protected from light. Because of their small size, allow the incubation of many more samples per incubator. Lower volume of waste.
4. Endure long incubations without dehydrating in conventional ovens, saving controlled humidity incubators investment (ej. Legionella)

MOREOVER:

5. Join advantages of long expiration (before exclusive of dehydrated media), the numerous advantages of sterile ready to use media; being prepared and ready for direct use, save time and labor costs also weigh, autoclave, dispense and monitor closely all these critical processes of preparation and control of media.
6. Manufactured under ISO 9001 standard and controlled with certified quantitative strains (with attached certificate to each box), this guarantee the best validation results: maximum recovery, sensitivity, specificity, accuracy, precision and limit of detection / quantification.
7. As the range is complete, your laboratory can meet all regulations and requirements of water and drink. Also, if you need any other media, MICROKIT will manufacture exclusively for you, in minimum lots of 180 units, for that we are manufacturers!
